1. Purpose

To provide a systematic approach to preventing, monitoring, and eliminating pest activity (rodents, cockroaches, flies, and ants) through non-chemical and chemical means, ensuring a contaminant-free environment.

2. Scope

To provide a comprehensive, facility and store-wide framework for preventing and controlling common urban vectors, such as rodents, cockroaches, and flies, across all internal production zones and external perimeters. Its scope encompasses the entire operational lifecycle—from structural exclusion and habitat elimination to targeted chemical interventions—while clearly defining the shared responsibilities between internal employees for daily monitoring and licensed Pest Control Operators for technical treatments. By aligning with the Food Safety Act of 2013 (RA 10611) and utilizing only FDA-approved food-grade chemicals, this SOP ensures a proactive, multi-layered shield that protects the integrity of the food supply chain and maintains full regulatory compliance.

3. Responsibilities

3.1. Management and Quality Assurance

Shall be responsible for the strategic oversight of the IPM program, beginning with the selection and management of a licensed Pest Control Operator (PCO). They must ensure the allocation of necessary resources for essential structural repairs to maintain pest exclusion and are tasked with the monthly verification of service reports and trend analyses to measure program effectiveness. Additionally, they serve as the custodians of the "Pest Control Master Folder," ensuring all critical documentation—including Safety Data Sheets (SDS) and trap location maps—is accurate and audit-ready.

3.2. All Employees

Shall serve as the frontline of the IPM program by maintaining rigorous sanitation standards through "Clean As You Go" (CLAYGO) practices to eliminate pest attractants like food debris and standing water. They are responsible for the immediate observation and formal recording of any pest activity—such as sightings, droppings, or gnaw marks—within the Pest Sighting Log. Furthermore, employees ensure daily operational compliance by keeping external doors and fly screens closed and adhering to strict storage protocols, such as keeping all food items at least 15cm off the floor to prevent harborage.

3.3. Pest Control Operator (Third Party)

Shall serve as the company's technical specialist, performing rigorous scheduled inspections of both internal and external areas to identify and mitigate potential harborage sites. Their role involves the hands-on maintenance, cleaning, and replenishment of all mechanical traps and bait stations, utilizing only FDA-approved, food-grade chemicals applied under strict protocols to eliminate any risk of cross-contamination. Beyond active control, the PCO acts as a strategic advisor, providing management with professional recommendations on structural repairs or sanitation gaps that need to be addressed to keep the facility's defenses intact.

4. Definition of Terms

- **Integrated Pest Management (IPM):** A systematic approach to preventing, monitoring, and eliminating pest activity (specifically rodents, cockroaches, flies, and ants) through a

combination of non-chemical and chemical means to ensure a contaminant-free environment.

- **Pest Control Operator (PCO):** A licensed third-party technical specialist responsible for performing regular facility inspections, maintaining and replenishing mechanical traps or bait stations, applying FDA-approved food-grade chemicals, and advising management on structural or sanitation gaps.
- **Clean As You Go (CLAYGO):** Rigorous, ongoing sanitation practices maintained by all frontline employees to eliminate potential pest attractants, such as food debris and standing water.
- **Electronic Fly Killers (EFKs):** Non-toxic electrical internal control devices permitted for use within food preparation areas to manage flying pests.
- **Safety Data Sheet (SDS):** Mandatory technical documentation detailing the properties and safety profiles for every chemical utilized on-site, which must be kept organized within the Pest Control Master Folder.
- **Pest Sighting Log:** A formal operational log used by staff members to immediately record any observed pest activity, including direct live sightings, droppings, or physical gnaw marks.

5. Physical Preventention

- **External Opening:** All doors must remain closed when not in use. Door sweeps must be maintained with a gap of no more than 6mm to prevent rodent entry
- **Screening:** Windows and ventilation points must have 16inch-mesh screens, free of tears.
- **Sealants:** All utility penetrations (pipes, conduits, and wall gaps) must be sealed with rodent-proof materials like stainless steel mesh or concrete

6. Restriction

- **Dry Storage:** All items must be stored 15cm (6 inches) off the floor and 45cm (18 inches) away from walls to allow for inspection and discourage nesting.
- **Water Management:** Eliminate standing water in drains, under refrigerators, or in mop buckets overnight
- **Waste Control:** External bins must be kept closed, leak-proof, and cleaned daily

7. Elimination

- **Internal Control:** Only non-toxic mechanical traps (glue boards, multi-catch traps) and Electronic Fly Killers (EFKs) are allowed in food preparation areas.
- **External Control:** Tamper-resistant bait stations containing rodenticides may only be used on the building's exterior
- **Chemical Application:** Only FDA-approved, food-grade chemicals may be used (e.g. food-safe insecticides and low-toxicity botanical repellants). Application is strictly limited to a licensed third-party pest control operator.

8. Monitoring and Inspection

- **Daily Check:** During the Clean as you Go (CLAYGO) process, employees must look for signs of activity: droppings, gnaw marks, greasy rub marks along walls, or live sightings.

- **Monthly PCO Visit:** A licensed professional will conduct a full facility sweep, service all traps, and provide a written report.
- **Trap Mapping:** A map of all numbered pest control devices must be kept in the FSMS folder.

9. Documentation Requirements

- Contract, a service agreement with a licensed PCO
- Safety Data Sheet (SDS), for every chemical used on-site
- Pest Sighting Log, to record any pest activity reported by staff
- Trend Analysis, a monthly report from the PCO showing if activity is increasing or decreasing

10. Corrective Action

In the event of a pest sighting within a food preparation area, immediate corrective action must be taken by isolating the affected zone and halting preparation to contain the risk. All raw materials and products in the vicinity must be inspected for signs of contamination and discarded immediately ***(IKQA-WI#006: Product Disposal)*** if compromised, followed by a call to the Pest Control Operator (PCO) for an emergency treatment or "flush-out." Once the PCO certifies the area is clear, a comprehensive deep clean—consisting of washing, rinsing, and sanitizing all food contact surfaces—must be performed and verified before any kitchen operations are permitted to resume

11. Change History

Revision No.:	Revision Date:	Author & Position:	Purpose of Revision
0	February 13, 2026	Marielle Louise Macabale**, QA Specialist**	Originator
1	March 05, 2026	Marielle Louise Macabale**, QA Specialist**	• Change the addressing of personnel; staff members to employees • Added examples of FDA approved, food safe pest control chemicals • Added IKQA-WI#006: Product Disposal in corrective action provision • Added additional signatory; L&D Manager
2	June 2, 2026	Celine Joy Sanchez**, QA Specialist**	• Added Definition of Terms
