1. Purpose

To establish a standardized process for the control, handling, storage, and disposal of all forms of waste, including recyclable materials, generated by the Commissary, Warehouse, and Store in compliance with the requirements stated in RA 9003 and RA 6969.

2. Scope

Defines the mandatory requirements for the safe handling, segregation, storage, labeling, and disposal of waste generated at the commissary and stores. The objective is to ensure regulatory compliance, minimize environmental impact, and protect the health and safety of all employees.

3. Responsibilities

3.1. Commissary Employee

Shall be responsible for managing organic food waste, production rejects, and industrial by-products generated during the food preparation and manufacturing process. To ensure proper handling, they must manage product rejects and scraps independently from other waste streams. When dealing with quality non-conformity, substandard items must be sealed in clear plastic liners, marked with a "Red" (Rejected) sticker, and signed by the Commissary Specialist. To prevent unauthorized human consumption, these rejects must be crushed or pulverized and treated with sanitizer prior to disposal. Furthermore, they must utilize separate bins for kitchen food scraps and vegetable waste, and secure formal approval from the Commissary Specialist before disposing of any off-standard direct materials, such as cut meats.

3.2. Commissary Specialist

Shall be accountable for overseeing the proper segregation, handling, and disposal of waste within commissary operations to ensure strict adherence to standardized protocols. Their responsibilities include formally approving the disposal of off-standard direct materials, such as cut meats, and ensuring that substandard product rejects are properly sealed in clear plastic liners, marked with a "Red" (Rejected) sticker, and signed off prior to pre-treatment. In the event of a waste management non-conformance, the specialist is tasked with conducting an initial investigation to identify personnel errors or supervisory oversights.

3.3. Warehouse Employee

Shall be tasked with the systematic handling of packaging debris, such as pallets,crates,and cardboard, while ensuring the proper storage of scrap materials before collection.They must ensure the proper sorting, labeling, and storage of scrap materials and recyclables in designated areas before they are collected by authorized third-party wastes collector. A critical part of their role involves protecting the company's intellectual property; they must strictly deface or destroy any materials bearing the company name, label or trademark, such as cardboard boxes, vacuum packaging, and stickers. Additionally, they are responsible for shredding company brochures and leaflets to guarantee that product images and trademarks are rendered completely unusable before disposal.

3.4. Store Employee

Shall be accountable for daily waste sorting at the store level, ensuring all refuse is correctly sorted at its point of origin. Their duties include managing consumer discards and food service waste, as well as maintaining the cleanliness of front-of-house disposal bins. They must ensure that all waste is deposited into distinctly identified containers that utilize a standardized combination of color codes, icons, and descriptive text.

3.5. Maintenance/ Engineering Employee

Shall be responsible for overseeing the proper management of construction wastes and debris generated during building maintenance, ensuring that contractors fulfill their sole responsibility for its storage, transport, and disposal. In the event that a contractor fails to clear the waste, the Maintenance Manager is mandated to withhold the Completion Report and notify the executive department. Additionally, the maintenance team is tasked with increasing the frequency of unannounced spot checks in areas where previous waste violations have occurred to ensure continuous compliance.

3.6. Sanitation Employee

Shall be accountable for the immediate containment, cleaning, and disinfection of waste storage areas to mitigate environmental risks. If hazardous or biodegradable waste is mishandled, they must safely sanitize the affected area immediately to prevent pest infestation or the spread of biohazards. Additionally, they are tasked with the routine disinfection of disposal bins across the kitchen and commissary areas. This includes ensuring that crushed or pulverized food production rejects are properly treated with sanitizer to prevent unauthorized human consumption, and immediately disinfecting affected areas.

3.7. Third - Party Waste Collection

Shall be strictly responsible for the legal and compliant hauling, transport, and final disposal of segregated commissary and store wastes in adherence to local government and environmental regulations. This category includes authorized LGU garbage trucks transporting non-recyclable items to DENR-compliant landfills , authorized scrap buyers purchasing recyclables , and DENR-accredited agents managing the safe extraction of hazardous and medical wastes. Third-party construction contractors are also accountable for clearing their own building debris , and any failure by a third party to adhere to these proper disposal standards will result in the suspension of all pending payments by the Finance and Administration department.

4. Definition of Terms

4.1. Biodegradable Waste: Organic materials, such as food scraps and paper, that naturally decompose over time and integrate back into the soil. (e.g. discarded food, botanical garden waste, and manufacturing rejects or sub-standard raw materials)

4.2. Collection Frequency: The designated number of times waste is scheduled to be picked up within a specific timeframe (e.g., weekly or bi-weekly)

4.3. Construction Debris: Discarded materials from building sites—such as concrete, timber, sand, metal scraps, and ashes—that carry a risk of polluting the land, air, or water if improperly managed.

4.4. **Hazardous Waste:** Dangerous or toxic remnants from industrial processes, factory operations contaminated machinery, or specific disposed consumer goods. (e.g. burnt-out bulbs, chemical leftovers, waste oil, pesticide containers, paint, contaminated cleaning rags, and sharp debris from broken glass.)

4.5. **Medical / Infectious Waste:** Potentially contaminated sanitary items, specifically used tissues or paper towels that require specialized handling.

4.6. **Non-Biodegradable Waste:** Refuse that resists natural decomposition and remains in the environment for decades or indefinitely. (e.g. disposable PPE (gloves, caps, shoe covers), used tissues, plastic films, food packaging, and expanded polystyrene (Styrofoam))

4.7. **Recyclable Materials:** Items that are capable of being processed, recovered, and repurposed into new goods. (e.g. paper products, cardboard, PET containers, various metal cans, plastic housings, spent ink cartridges, and transport pallet)

4.8. **Recycling:** The complete cycle of sorting, gathering, and converting waste materials into fresh, usable commodities, which also includes the practice of buying goods made from these recovered materials.

4.9. **Scrap:** Leftover or rejected items (like cardboard boxes, tin cans, metal bars, and plastic bottles) that retain enough value to be sold to certified junk buyers or waste collectors.

4.10. **Waste Collection:** The physical act of picking up and transporting trash from its point of origin or shared disposal areas.

4.11. **Yard Waste:** Organic debris generated from landscaping, gardening, or land clearing, including leaves, branches, grass clippings, and tree stumps.

5. Waste Segregation, Handling, and Disposal Protocols

Waste containers must be distinctly identified using a combination of standardized color codes, icons, and descriptive text to ensure clear classification.Waste must be sorted at its point of origin to ensure efficient management. The following guidelines outline the specific procedures for various waste categories:

5.1. Recyclable Materials

Recyclables must be sorted, labeled, and stored in a designated area. These materials are sold exclusively to Third Party - Authorized scrap buyers.

a. **Equipment Disposal:** Defective or worn-out production tools, machinery, and pantry wares require formal disposal approval from the **Finance and Administration Manager**.

b. **Supervision:** All hauling and disposal activities must be witnessed by the **Utility employee** and coordinated with the **Security Team**.

5.2. Non-Recyclable Wastes

Non-recyclables are to be placed in **black bags** and sorted accordingly.

a. **Disposal:** Collection is handled solely by authorized **LGU garbage trucks** for transport to DENR-compliant landfills.

b. **Scheduling:** Pickups are coordinated with the **Purchasing/SCM Team**. In the event of a missed LGU collection, the relevant department must work with the **SCM Manager** to arrange alternative storage or disposal.

5.3. Hazardous Wastes

Hazardous materials must be isolated in labeled containers and stored in a dedicated room or area.

a. **Glass & Bulbs:** Broken glass, splinters, and spent bulbs must be wrapped in cardboard, labeled, and placed in a specific bin at the facility's waste area.
b. **Liquid Waste:** Used oils from machinery or production must be stored in labeled drums or carboys.
c. **Chemicals & Soiled Items:** Chemical residues and contaminated materials (e.g., soiled rags, empty spray bottles) must be handled separately.
d. **Accreditation:** Disposal of registered hazardous waste is restricted to **DENR-accredited agents**, following the minimum requirements of the LGU.

5.4. Biodegradable Wastes

a. **Product Rejects & Scraps:** These must be managed independently of other waste streams.
b. **Quality Non-Conformity:** Substandard items must be sealed in clear plastic liners and marked with a **"Red" (Rejected) sticker**, signed by the **Kitchen Captain**.
c. **Pre-treatment:** To prevent unauthorized human consumption, rejects must be **crushed or pulverized** and treated with **sanitizer** before disposal.
d. **Monitoring:** Disposal must be overseen by a **responsible department** and the **Housekeeping / Maintenance employee**.
e. **Kitchen & Direct Materials:** Food scraps and vegetable waste from kitchen operations require separate bins. Off-standard direct materials (e.g., cut meats/fallen carcass) are disposed of only upon **Kitchen Captain or Shift Manager or Restaurant Manager** approval.

5.5. Construction Wastes

a. **Contractor Accountability:** The storage, transport, and disposal of debris from building maintenance or construction are the sole responsibility of the **contractor**.
b. **Compliance Penalties:** If a contractor fails to clear waste, the **Maintenance Manager** will withhold the Completion Report and notify the Executive Committee.
c. **Payment Hold:** The **Finance and Administration Team** will suspend all pending or final payments until the site is properly cleared of construction waste.

5.6. Medical and Infectious Wastes

a. **First-Aid Waste:** Dedicated, labeled bins must be provided for medical waste generated during first-aid treatments.
b. **Daily Maintenance:** These bins must be emptied daily and transferred to a secondary container within the main garbage area.
c. **Final Disposal:** Removal is conducted via **DENR-accredited LGU collection services**

5.7. Protection of Intellectual Property (Special Instructions)

a. To prevent the unauthorized reuse of company branding, all materials bearing the **Jiang Nan Hotpot label or trademark**—including cardboard boxes, vacuum packaging, and stickers—must be **defaced or destroyed**. Similarly, company brochures and leaflets must be shredded to ensure product images and trademarks are rendered unusable.

6. Corrective Actions

If the Standard Operating Procedure (SOP) for waste management is violated, a structured corrective action process must be implemented to mitigate environmental risks and prevent

recurrence. Below are the formal corrective action steps categorized by the severity and nature of the non-conformance:

6.1. Immediate Containment and Mitigation

a. **Immediate Re-segregation:** If waste was improperly mixed (e.g., hazardous waste found in a recyclable bin), the area must be cordoned off, and trained employees must re-sort the materials using appropriate Personal Protective Equipment (PPE).
b. **Sanitization:** If biodegradable or hazardous waste was mishandled, the affected area must be disinfected immediately to prevent pest infestation or biohazard spread.
c. **Spill Response:** In cases where hazardous liquids were not stored in carboys or drums, spill kits must be deployed to contain the leak.

6.2. Investigation and Root Cause Analysis (RCA)

The relevant Department Head or the Manager should conduct an investigation to determine why the SOP failed:

a. **Personnel Error:** Was the employee unaware of the color-coding or labeling requirements?
b. **Equipment Failure:** Were there insufficient bins or liners available at the source?
c. **Supervisory Oversight:** Did the Maintenance employee or Security fail to witness the disposal as required.

6.3. Formal Documentation

a. **Non-Conformance Report (NCR):** A formal record must be created detailing the date, location, type of waste involved, and the specific SOP clause that was violated.
b. **Corrective Action Report (CAR):** This document should outline the steps taken to fix the immediate problem and the long-term plan to prevent it from happening again.

6.4. Disciplinary and Training Measures

- **Refresher Training:** Mandatory re-training on waste classification and segregation protocols for the involved employees (Commissary, Warehouse, or Store staff).
- **Disciplinary Action:** If the non-conformance was due to negligence (e.g., failing to disfigure Jiang Nan Hotpot-branded packaging or disposing of product rejects without pulverizing them), disciplinary action should be taken in accordance with the company's Code of Conduct.

6.5. Third-Party / Contractor Management

a. **Contractor Non-compliance:** As per the SOP, if a construction contractor fails to dispose of waste, the Maintenance Manager must withhold the Acceptance/Completion Report.
b. **Financial Penalties**: The Finance and Administration Team must suspend all pending payments until the contractor rectifies the waste disposal issue according to DENR standards.

6.6. Process Improvement and Audit

a. **Increased Audit Frequency:** The Maintenance and responsible department should increase the frequency of unannounced spot checks in the area where the violation occurred.
b. **Signage Update:** If the error was due to confusion, labels, color codes, and symbols on the receptacle bins should be made more visible or intuitive.

7. Documentation and Verification

a. Daily Waste Management Checklist

i. Plastic Bag Color Coding
ii. List of Hazardous Wastes with DENR Classification
iii. Trash Bin Color Coding

9. References

- **Republic Act No. 9003,** or the **Ecological Solid Waste Management Act of 2000,** is the Philippines' foundational law for proper waste disposal and management. It mandates waste segregation at the source (compostable, recyclable, residual, special waste), the establishment of barangay-level Materials Recovery Facilities (MRFs), and local government unit (LGU) responsibility for collection and disposal.
- **Republic Act No. 6969,** or the **Toxic Substances and Hazardous and Nuclear Wastes Control Act of 1990**, is a Philippine law regulating the importation, manufacture, processing, handling, storage, transportation, sale, and disposal of toxic chemicals and hazardous wastes. It mandates the management of hazardous waste to protect public health and the environment, prohibiting the entry of foreign hazardous waste
